Art Unit: 2823

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on 01/24/2007 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 235, 237-239, 242, 247, 251, 255, and 259, are rejected under 35 U.S.C. 102(b) as being anticipated by Bower et al (U.S. Patent 5,503,704).

Bower et al discloses a processing method, comprising exposing a first surface of a first element substrate to a plasma (Abstract, and Column 5, lines 12-41), cleaning said first surface after exposure to said plasma by removing contaminants from said surface (Abstract, and Column 4, lines 45-67), terminating said first surface with a chemical species after said cleaning step by immersing said surface in an ammonia-based solution (Abstract, and Column 5, lines 12-22), bonding said first surface to a second surface of a second element substrate after said terminating step (Abstract and Column 5, lines 23-32), wherein said exposing, cleaning and terminating steps, are performed in order, on said second surface of said second substrate prior to said bonding step (Column 4, lines 45-67, and Column 5, lines 12-41), heating said first and

second substrates to enhance bond strength between said first and second elements and forming a bonding layer on said first and second substrates, and performing said exposing, cleaning, and terminating steps on a third surface of said bonding layer (Column 4, lines 45-67, and Column 5, lines 12-41).

Claims 236, 240, 241, 243-246, 248-250, 252-254, and 256-258, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 138-234 are allowed.
